# ckeditor 配置

1. 导入编译好的ckeditor.js插件，并导入

2. 编写测试代码

```
import React, { Component } from 'react';
// import scriptjs from 'scriptjs';

export default class RichText extends Component {
  constructor(props) {
    super(props);
    this.state = {
    };
  }

  componentDidMount() {
    window.ClassicEditor.create(document.querySelector('#MyTextArea'))
      .then((editor) => {
        this.setState({
          editor,
        });
      })
      .catch((error) => {
        console.error(error);
      });
  }

  save = () => {
    const { editor } = this.state;
    console.log(editor.getData());
  }

  render() {
    return (
      <div className="edtior">
```

```
            <textarea id="MyTextArea" cols="200" rows="200" />
            <input type="button" value="保存" onClick={this.save} />
        </div>
    );
    }
}
```

3. 配置代理
